

The innovative view at www.imagsa.com

Yes, **we can see**

Don't let the light dazzle your vision system

Imagsa overcomes the hurdles of existing vision systems with extreme sunlight variations on high speed moving targets. This technology improvement relies on integrating a high-performance computing unit (FPGA device) into an all-in-one smart camera for traffic control and enforcement applications.

Imagsa develops reliable, flexible and cost-effective vision solutions that meet the most demanding requirements of the ITS market.
